

Upgrade transactional database performance with Dell PowerEdge R660 servers running VMware vSphere 8.0

In a VMware vSAN cluster, the latest-generation servers completed more orders per minute (OPM) than clusters of older servers

2.3x
the OPM

of the VMware® vSAN™ cluster using Dell™ PowerEdge™ R640 servers

17%
more OPM

than the vSAN cluster using PowerEdge R650 servers

The performance of the latest-generation Dell PowerEdge R660 servers powered by 4th Gen Intel® Xeon® Scalable processors could help your organization generate more revenue, offer more services, or expand your user base.

Total OPM | Higher is better
